PROFILE

Game Design and Development student with a background in Information Technology and hands-on experience developing game projects using Unity. Focused on level design, systems design, gameplay design, prototyping, playtesting, game analysis, balancing, and player-focused problem solving. Interested in creating clear, structured player experiences and translating design ideas into playable prototypes and documented systems.

EDUCATION

ICAT College of Design and Media | 2024–2027

B.Sc. Game Design and Development

Relevant focus: Game Design, Level Design, Game Development, Gameplay Systems, Unity, Prototyping

PSG Polytechnic College | 2021–2024

Diploma in Information Technology

Relevant focus: Programming, Software Development, Computer Fundamentals, Problem Solving

WORK EXPERIENCE

RavioSoft Studios

Combat Designer Intern

- Applied combat design principles to develop and refine player combat experiences, focusing on mechanics, enemy interactions, pacing, and player feedback.
- Learned iterative game-design workflows by testing gameplay, identifying design issues, and refining combat decisions based on observations and feedback.
- Developed professional collaboration skills by working within a game-development team and communicating design requirements and gameplay decisions with other disciplines.

SKILL

- Game Design: Gameplay Design, Systems Design, Level Design, Combat Design, Game Loops, Player Motivation, Progression, Balancing, Challenge & Reward
- Level Design: Player Flow, Level Blockout, Bubble Diagrams, Critical Paths, Optional Paths, Encounter Pacing, Difficulty Progression

- Design Process: Game Analysis, Playtesting, Feedback Analysis, Iteration, Problem Solving, Design Documentation
- 3D & Visual: Autodesk Maya, 3D Blockout, Camera Composition, Lighting

PROJECTS

Ren: The Path of Destiny

Game Designer & Level Designer

- Designed gameplay experiences and level structures with focus on player flow, pacing, challenge, and progression.
 - Created level layouts, bubble diagrams, and blockouts to communicate and validate player navigation and encounter structure.
 - Designed and refined gameplay interactions based on player goals, level progression, and encounter requirements.
-

Bin It to Win It

Game Designer / Developer | Unity

- Designed core gameplay interactions, player goals, rules, and reward structure.
 - Prototyped gameplay systems in Unity and iterated based on testing and observed player experience.
 - Applied game-design principles to improve clarity, pacing, challenge, and player engagement.
-

Lost Trance

UI/UX Designer

- Designed user interfaces with focus on usability, visual hierarchy, navigation, and player feedback.
 - Structured UI/UX flows to support clear player interaction and communication.
 - Iterated interface designs based on usability evaluation and gameplay requirements.
-

GAME DESIGN STUDIES

Game Design / Systems Analysis

- Analyze games to identify core gameplay loops, player motivations, progression structures, challenge, rewards, and design patterns.
 - Break down gameplay systems into rules, player actions, feedback, rewards, and progression.
 - Study level layouts and encounter structures to understand how designers guide player decisions and pacing.
 - Explore balancing and iteration through structured design analysis and playtesting.
-
